## **MONTHLY REPORT JANUARY 1994**

---

**PAC 004 WEATHER ANALYSIS IN HANØYTANGEN  
REPORT 3 : April 27 1994**

CLIENT : DNMI  
CONTRACT NO. : KCC/PAC004/001  
PROJECT NO. :  
DOCUMENT NAME : RAPPJAN.94  
PROJ. MANAGER : Knut A. Iden  
EXECUTED BY : Bjørn. H. Halvorsen and Knut A. Iden  
APPROVED BY : Bjørn Aune *Bjørn Aune 03.05.1994*  
COMPLETION DATE : April 14 1994  
REV 1. : April 27 1994

DSU : serial no. 6602 and no. 6601  
Received : January 27 and March 14 1994

**Comments regarding the data :**

The DSU serial no. 6602 contains data the period 23/11/93 to 20/01/94 and serial no. 6601 contains data for the period 26/1/94 to 1/3/94.

The DSU is read by the standard software (P3059) delivered from Aanderaa a/s. The calibration factors applied is provided by Aanderaa in a fax dated January 21 1994.

The data stored for the period 19/1/13<sup>th</sup> to 20/1/ is probably suffering from the power malfunctioning. They are of no use and is eliminated during the processing. Appendix 3 gives a listing of these data.

The processing is based on the accepted data and conducted after the following scheme :

- generate a combined SAS data set of the data for January

In this step 10 min mean wind speed > 35 m/s and gust wind > 40 m/s are replaced with missing values. The wind speed in 30 m is also compared to the wind speed measured 18 m above the ground. If deviation is 10 m/s above or 5 m/s below the wind speed measured in 18 m, the wind speed in 30 m is replaced by missing value. This is because there seem to be some disturbances connected to the measurements in the top of the mast (30 m). The other meteorological parameters are tested to be inside reasonable intervals.

- Plots of the time series are generated and examined.
- Un physical values (spikes) are eliminated.
- Final plots of the time series are generated.

For wind speed and wind direction 10 min values are plotted. For the parameters air temperature (T), humidity (UU) and air pressure reduced to mean sea level (QFF), hourly means are plotted. The hourly mean for 11.00<sup>h</sup> is defined by the measurements for 10.30<sup>h</sup>, 10.40<sup>h</sup>, 10.50<sup>h</sup>, 11.00<sup>h</sup>, 11.10<sup>h</sup> and 11.20<sup>h</sup>.

- Distribution tables wind speed /direction are generated. 22.5° intervals are applied for the direction. N='348.76° - 11.25°, NNE = '11.26 - 33.75' ...
- Wind roses are generated.
- Coefficient transfert tables are generated.
- Duration table are generated.

Logging each 10 minute

**OTHER METEOROLOGICAL DATA**

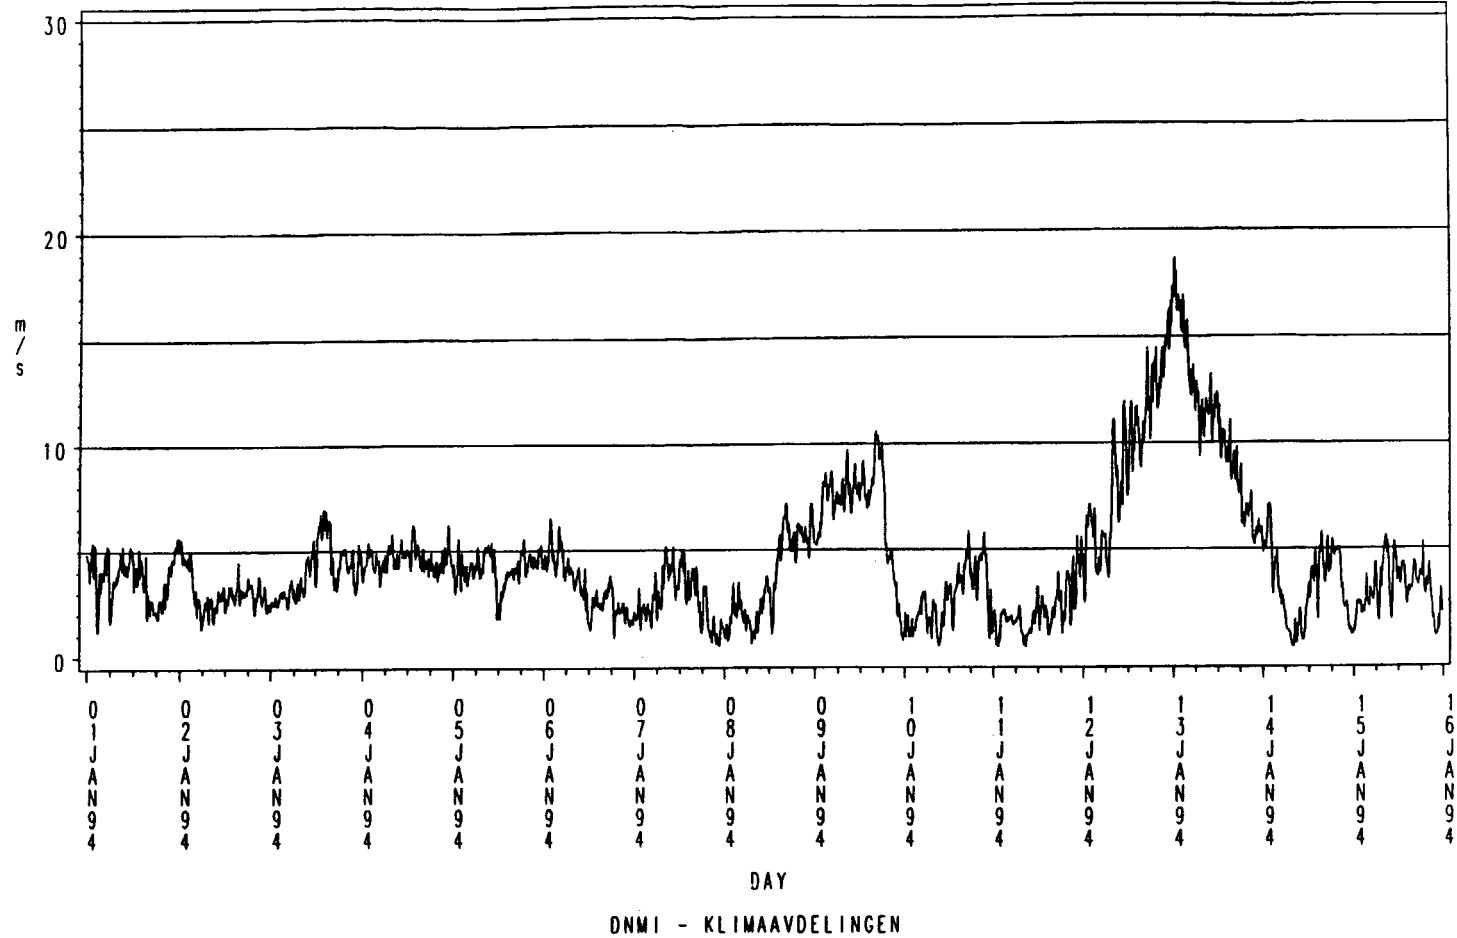

<u>Parameter</u>	<u>Height</u>	<u>Cover.</u>	<u>Unit</u>	<u>Mean</u>	<u>ST.D.</u>	<u>Max</u>	<u>D.:hour</u>	<u>Min</u>	<u>D.:hour</u>
Air Temp.	2. m <sup>3</sup>	77.4 %	C	2.1	2.2	6.7	11:2110	-4.0	16:2240
Rel. Hum.	2. m <sup>3</sup>	77.4 %	%	70	12.0	89	17:2240	44	04:1320
Air pr.	0. m <sup>3</sup>	77.4 %	hPa	998.0	11.3	1019.6	29:0933	966.2	27:2043

- 1 Direction is referenced to True North (accuracy +/- 2°)
- 2 Direction of gust wind is not measured. The mean wind direction for the ten minute period when it has occurred is applied.
- 3 Air temperature sensor and humidity sensor are placed in the mast 2 m above the reference point on the ground while the pressure sensor have the same height as the reference.  
The reference point on the ground is located 15.64 m above the mean sea level (NGO).

## **DISTRIBUTION TABLES / WIND ROSES**

The distribution table gives details about the distribution of the wind speed for a certain wind direction or the distribution of the wind directions for a certain wind speed.

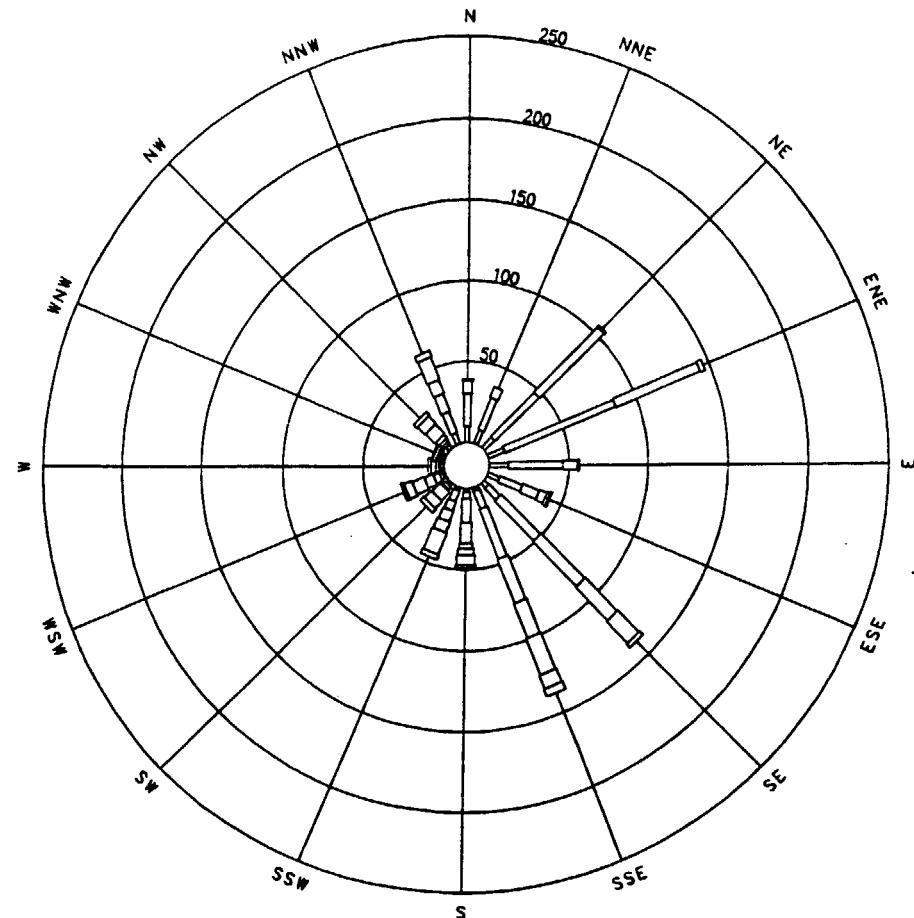

If for example, it is of interest to know the directions for which wind force 5 Beaufort have occurred this month, one has to look at the line for 5 Beaufort in the table.

If the information of the wind forces that have occurred this month for a certain direction is of interest, one has to look at the column for that specific direction.

The frequencies in the table are given per thousand (Prm) of the data available this month.

The wind rose is a graphic representation of the information given in the distribution table. The same number of classes is applied. No Beaufort value is given to the centre of the wind rose. Thus, the first class outside the centre is 0 Beaufort (0-0.2 m/s). Due to the calibration of the wind sensors, this class will always be empty at Hanøytangen.

## **COEFFICIENT TRANSFERT TABLES**

The tables are actually histograms of the quotient given in the heading of the tables, plotted horizontally. They give details about the distribution of the quotients.

The class interval is 0.05 and the frequencies for the actual class is plotted at the midpoint of the class. If the quotient is 1 the wind speed in the two heights considered have the same value.

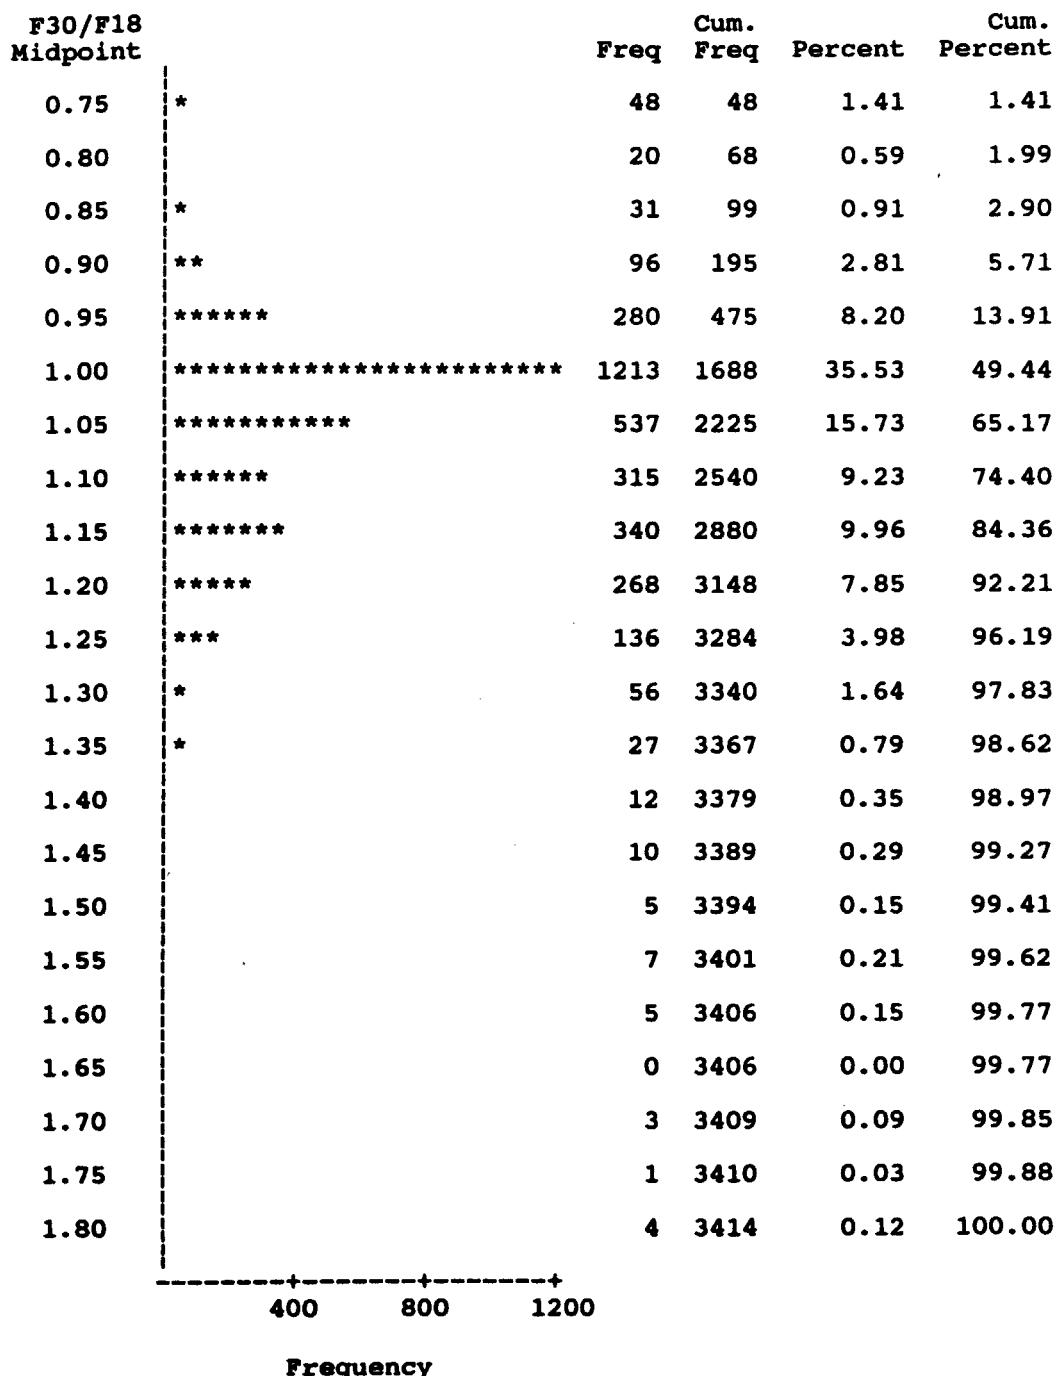

The classes start at 0.75 (.725-.774) and end at 1.80 (1.775-1.824). Quotients below or above these limits are counted in these classes respectively.

The tables are giving the frequencies in the actual classes in percent and also as cumulative frequencies in percent.

F30 = Wind speed 30 m above the ground  
F18 = Wind speed 18 m above the ground  
F10 = Wind speed 10 m above the ground

## QUOTIENT F30/F10

# HANØYTANGEN JANUARY 1994

## QUOTIENT F18/F10

## OCCURRENCE TABLES

The content of the table is based on the hourly maxima (Fx) of the 10 min wind speed. First a period fulfilling the criterion  $Fx < \text{Limit}$  is sought. The length of this period is divided by the length of the windows specified and may result in multiples of the actual window or zero if the length of the period is less than the length of the actual window. This procedure is repeated through the month and the number of the different windows are accumulated.

## **CLIMATOLOGICAL SUMMARY**

**Appendix 1****BEAUFORT SCALE OF WIND**

BEAUFORT NUMBER	DESCRIPTIVE TERM	MEAN VELOCITY IN KNOTS	MEAN VELOCITY IN m/s
0	Calm	< 1	0 - 0.2
1	Light air	1 - 3	0.3 - 1.5
2	Light breeze	4 - 6	1.6 - 3.3
3	Gentle breeze	7 - 10	3.4 - 5.4
4	Moder. breeze	11 - 16	5.5 - 7.9
5	Fresh breeze	17 - 21	8.0 - 10.7
6	Strong breeze	22 - 27	10.8 - 13.8
7	Near gale	28 - 33	13.9 - 17.1
8	Gale	34 - 40	17.2 - 20.7
9	Strong gale	41 - 47	20.8 - 24.4
10	Storm	48 - 55	24.5 - 28.4
11	Violent storm	56 - 63	28.5 - 32.6
12	Hurricane	64 and over	32.7 and over
